PROFESSIONAL SUMMARY

Odoo developer with 2+ years of experience taking ERP work from requirement to production: analysing business processes, designing the solution, building it, and supporting it once live. Comfortable across the full stack — Python business logic on the ORM, XML views, QWeb PDF and Excel reports, OWL/JavaScript components, and HTTP/JSON controllers for portal pages, mobile apps, and REST integrations. Delivery experience spans HR and payroll, accounting, sales, purchasing, inventory, project management and POS, alongside third-party integrations (payment gateways, biometric attendance devices, government platforms) and version migrations from Odoo 14 through 19. Works the business side as well as the technical one — requirement workshops with clients and consultants, functional specifications and gap analysis, configuration before customization, data migration, UAT, and end-user handover.

WORK EXPERIENCE

Odoo Developer — ILINES Solutions

07/2025 – Present

Riyadh, Saudi Arabia (Remote)

- Analyse requirements from consultants and client stakeholders, map them onto standard Odoo where configuration can cover the need, and specify the custom development where it cannot.
- Develop and maintain custom modules across a large multi-company Odoo suite covering HR and payroll, accounting, procurement, project management, inventory and assets.
- Build features end to end — data models and computed fields, form/list/kanban views, wizards, approval workflows, access rights and record rules, QWeb PDF and XLSX reports, and dashboards.
- Integrate Odoo with external systems through controllers and REST APIs, including the Tap payment gateway for online payments with automatic reconciliation into Sales and Accounting.
- Extend the portal and website layer, including a lightweight Portal POS that lets portal users browse products and place simplified, trackable orders.
- Handle migrations to Odoo 19 and post-go-live support: data migration scripts, UAT feedback cycles, and issues raised by HR, finance, and procurement users.

Odoo Developer — Hash Code IT Solutions

01/2025 – 07/2025

Dubai, United Arab Emirates (Remote)

- Ran requirement-gathering sessions with clients and functional consultants, mapped existing business processes onto Odoo's CRM, Sales, Inventory, and Accounting flows, and documented the gaps that needed custom development.
- Customized Odoo's core apps with Python, XML, and JavaScript — new models and fields, inherited views, automated actions, and tailored reports — to fit each client's processes.
- Migrated databases and custom modules from Odoo 14 to 18: refactored deprecated APIs, adapted views to newer framework versions, and validated data integrity after each upgrade.
- Demonstrated delivered features to clients, collected UAT feedback, and resolved post-go-live issues, replacing manual processes with automated Odoo workflows.

Odoo Developer — IRAM

03/2024 – 12/2024

Latakia, Syria

- Worked directly with hotel management and front-desk staff to map daily operations — reservations, rate policies, night audit, and outlet billing — into the system design.
- Designed and delivered a complete Hotel Management System on Odoo, in production at Grand Hotel Tartus — data model, business logic, views, and reports built from the ground up.
- Implemented the operational core: front office (check-in/check-out, room assignment, reservations), rate management with demand- and occupancy-based pricing, and an automated night audit closing the day's financials.

- Integrated Point of Sale across hotel services, built configurable management reports for occupancy and revenue, and trained staff on the delivered system.

SELECTED PROJECTS

Hotel Management System — Odoo ERP

2024

Grand Hotel Tartus — production deployment

- Property-management system built as a set of custom Odoo modules: reservations, room inventory and availability, guest folios, and rate plans.
- Rate engine applying demand- and occupancy-based pricing; automated night audit that posts daily revenue and closes the operating day.
- POS integrated across hotel outlets so service charges route to the guest folio, with QWeb reports for occupancy, revenue, and daily operations.

Portal POS & Online Payment Integration — Odoo

2025

iLines Solutions — client deployment

- Lightweight POS exposed through the Odoo portal: portal users browse a catalogue, place simplified orders, and track status without back-office access.
- Built with website/portal controllers, QWeb templates, and JavaScript on the front end, backed by a custom order model bridging into Sales.
- Tap payment gateway integration handling redirect and callback flows, transaction state reconciliation, and automatic posting to Sales and Accounting.

Construction Project Management Suite — Odoo 19

2025 – Present

iLines Solutions — contracting sector clients

- Custom project modules for contracting clients: CSI cost coding, BOQ comparison, manpower analytics, and management dashboards.
- Budget-control layer enforcing spending limits across purchase requests, receipts, and payment documents through a reusable validation mixin.
- Version-migration scripts that carry live project data safely across module upgrades.

SKILLS

Odoo: Views, Inheritance, Special Models, QWeb, Controllers

Functional: Business process analysis, requirement gathering, functional specifications, gap analysis, configuration, UAT, data migration, end-user training

Backend: Python, Django, REST APIs, PostgreSQL

Frontend: HTML, CSS, JavaScript

Tools: Git, Linux, Docker, Celery

EDUCATION & TRAINING

B.Sc. Software Engineering — Tishreen University

09/2019 – 10/2024

Latakia, Syria

Odoo Business Technology and Cloud Operations (BTCO) Training

04/2024 – 06/2024

Odoo customization concepts for developers and IT professionals
